number is the most underestimated of the grammatical categories it is deceptively simple yet the number system which philosophers logicians and many linguists take as the norm namely the distinction between singular and plural as in cat versus cats is only one of a wide range of possibilities to be found in languages around the world some languages for instance make more distinctions than english having three four or even five different values adopting a wide ranging perspective greville corbett draws on examples from many languages to analyse the possible systems of number he reveals that the means for signalling number are remarkably varied and are put to a surprising range of special additional uses by surveying some of the riches of the world s linguistic resources this book first published in 2000 makes a major contribution to the typology of categories and demonstrates that languages are much more varied than is generally recognised

agreement is the grammatical phenomenon in which the form of one item such as the noun horses forces a second item in

the sentence such as the verb gallop to appear in a particular form i e gallop must agree with horses in number even though agreement phenomena are some of the most familiar and well studied aspects of grammar there are certain basic questions that have rarely been asked let alone answered this book develops a theory of the agreement processes found in language and considers why verbs agree with subjects in person adjectives agree in number and gender but not person and nouns do not agree at all explaining these differences leads to a theory that can be applied to all parts of speech and to all languages

this book is the first typological study of adjective attribution marking its focus lies on northern eurasia although it covers many more languages and presents an ontology of morphosyntactic categories relevant to noun phrase structure in general beside treating synchronic data the study contributes to historical linguistics by reconstructing the origin of new types specifically in the language contact area between the indo european and uralic families

lexical functional grammar lfg is a nontransformational theory of linguistic structure first developed in the 1970s by joan bresnan and ronald m kaplan which assumes that language is best described and modeled by parallel structures representing different facets of linguistic organization and information related by means of functional correspondences this volume has five parts part i overview and introduction provides an introduction to core syntactic concepts and representations part ii grammatical phenomena reviews lfg work on a range of grammatical phenomena or constructions part iii grammatical modules and interfaces provides an overview of lfg work on semantics argument structure prosody information structure and morphology part iv linguistic disciplines reviews lfg work in the disciplines of historical linguistics learnability psycholinguistics

and second language learning part v formal and computational issues and applications provides an overview of computational and formal properties of the theory implementations and computational work on parsing translation grammar induction and treebanks part vi language families and regions reviews lfg work on languages spoken in particular geographical areas or in particular language families the final section comparing lfg with other linguistic theories discusses lfg work in relation to other theoretical approaches

bringing together the results of sixty years of research in typology and universals this textbook presents a comprehensive survey of morphosyntax the combined study of syntax and morphology languages employ extremely diverse morphosyntactic strategies for expressing functions and croft provides a comprehensive functional framework to account for the full range of these constructions in the world's languages the book explains analytical concepts that serve as a basis for cross linguistic comparison and provides a rich source of descriptive data that can be analysed within a range of theories the functional framework is useful to linguists documenting endangered languages and those writing reference grammars and other descriptive materials each technical term is comprehensively explained and cross referenced to related terms at the end of each chapter and in an online glossary this is an essential resource on morphosyntax for advanced undergraduate and graduate students researchers and linguistic fieldworkers

this is the first of a three volume comprehensive reference work on gender across languages which provides systematic descriptions of various categories of gender grammatical lexical referential social in 30 languages of diverse genetic

typological and socio cultural backgrounds among the issues discussed for each language are the following what are the structural properties of the language that have an impact on the relations between language and gender what are the consequences for areas such as agreement pronominalisation and word formation how is specification of and abstraction from referential gender achieved in a language is empirical evidence available for the assumption that masculine male expressions are interpreted as generics can tendencies of variation and change be observed and have alternatives been proposed for a more equal linguistic treatment of women and men this volume and its follow up volumes will provide the much needed basis for explicitly comparative analyses of gender across languages all chapters are original contributions and follow a common general outline developed by the editors the book contains rich bibliographical and indexical material languages of volume 1 arabic belizean creole eastern maroon creole english american new zealand australian hebrew indonesian romanian russian turkish
